

The *GeometricaPlus* package is compatible with *Mathematica*10.0.

The folder which contains *GeometricaPlus* is called *Geometrica* and has to be loaded into the folder : *Mathematica/Applications*.

On Macintosh computers, the programs are stored in *Library* which is not directly visible. To find it,

1. Open *Finder*
2. Select the *Go* menu
3. Press the *Alt* key : the folder *Library* pops-up. Keep the *Alt* key pressed and click *Library* : the content of *Library* pops-up.
4. In *Library*, go to *Mathematica/Applications* and insert the *Geometrica* folder.

To use the functions of the package, type in a *Mathematica* notebook :
Needs["Geometrica`"]

To access the documentation,

1. Go to the *Mathematica* menu *Help*
2. Select *Wolfram Documentation*. The table *Wolfram Language & System* pops-up.
3. Go to the last line of the page and select *Add-ons and Packages* at the end of the line: the *Installed Add-Ons* page pops-up.
4. In the *Installed Add-Ons* page, select *Geometrica* and click *Documentation* : the *GeometricaPlus* page pops-up. The *GeometricaPlus* page contains an overview of the package with links to the various chapters.
5. For a first approach, go to each chapter and discover the related functions in exactly the same way as in *Mathematica* documentation.
6. Those who are already familiar with *Geometrica* will notice numerous changes. They can jump to the function pages directly by selecting *Index* in *Tutorials*.
